Simply convincing

We believe that an umbrella has to satisfy the demands on functionality, safety and quality to be able to be effective as a long-lasting promotional item. Let yourself be convinced by the solid arguments in favour of a quality umbrella from HOMI®.

A trustworthy argument:

HOMI® have been approved as Golden Supplier on Alibaba, verified onsite by world-leading inspection company---TUV.

Contents including:

- ① PRODUCT CAPACITY
- ② QUALITY CONTROL
- ③ R&D CAPACITY
- ④ TRADE CAPABILITIES

You can find more details on our website:
<https://hmumrella.en.alibaba.com>
<https://homihome.en.alibaba.com>

A clean argument:

HOMI® products are tested for harmful substances.

LABTECH and other renowned and accredited testing institutes test our products according to REACH (Registration, Evaluation, Authorisation and Restriction of Chemicals). Alongside conformity with REACH, the relevant legal directives for harmful substances are considered and implemented for our products.

A fair argument:

HOMI® products are produced under humane conditions.

- ③ As a member of the BSCI (Business Social Compliance Initiative), we are committed to complying with the code of conduct that governs ethically unobjectionable supply chains.
- ③ The aim is to improve working conditions by fostering responsible behaviour, particularly in terms of the discrimination of women and the abolishment of forced and child labour. The code is based on the UN human rights declaration, the conventions of the international labour organisation ILO, the UN Global Compact and OECD guidelines.

A windproof argument:

HOMI® umbrellas are strong.

The HOMI® top models are equipped with a reliable windproof system. The highly flexible frame on these models turns inside out in heavy gusts of wind before the ribs break or the cover is ripped out of its fixing. Even most standard models have windproof features for better wind stability.

Doming

3D effect vivid colours for a particularly demanding ,photo-realistic result.High-quality finished surface,extremely durable.

Labelling options:Push-buttons,umbrella handles

Laser stickers

Available in two-colours and in many different shapes and sizes. Ideal for individual personalisation. Simple, flexible and cost-effective. Very good adhesion properties. Labelling options: Push-buttons, umbrella handles

EVA laser engraving

Particularly vivid three-dimensional effect and pleasant to hold. Appropriate umbrellas with soft handles suitable for laser engraving are indicated accordingly. Labelling options: Umbrella handles

Excitingly designed

An umbrella offers a huge variety of refinement possibilities. On the following four pages we show you the different printing methods and their areas of application.

Screen printing

The technique of choice and a proven track record. Up to eight fresh colours may be used for logos, slogans, funny texts or images. The best possible quality and a long lifespan are always at the forefront.

Dual printing

In order to ensure strong brightness and colours true to the original when using coloured fabric, either dual printing is required or a white undercoat is applied underneath the colour. The opacity of the applied colour is then increased considerably.

Printing colour, white: This requires a dual printing process that is calculated like two-colour printing. Preliminary costs for film, set up and screen costs are only charged once per logo.

Coloured printing: In this case, we work with a white undercoat. It is slightly smaller than the coloured motif to ensure that no white is visible. Costs are incurred for the additional print colour and the corresponding pre-printing costs.

Price tip: Printing with colour on white umbrellas costs less as it does not require the white undercoat. The colours silver, gold and black are particularly suitable on all covers because they display good coverage even without the white undercoat.

White single print

White dual print

Coloured screen print without white undercoat

Coloured screen print with white undercoat

Screen printing with color changing overprinting when dry

Screen printing without color changing overprint

Screen printing with color changing overprint when wet

Color Change

An exceptional way to turn grey, rainy days into a happy event is with color changing printing !
 As soon as the surface gets wet, the white print becomes transparent and the underlying colour becomes visible.

Individual & versatile

With a little courage and by advance planning, individual customisations can be designed that are completely tailor-made to match the customer's Corporate Identity. It is worth it: Many of these unique designs have now developed into real cult items.

Cover colours and cover fabrics

Do you like one of the umbrellas from the stock range, but the entire cover should have a different colour? Should one or more wedges be coloured? Your ideas can be realised very well with our choice of standard colours. We can also produce the cover fabric in your custom colour.

Wetlook

The umbrellas appear neutral at first glance. A hidden design appears when wet thanks to the special printing technique. Individual wetlook motifs are produced as customisations and are possible on all HOMI models

All-over printing

Very popular variants for customisations are motifs that extend over several panels or display a photo realistic image over the entire cover. The panels are cut, sewn and fixed to the frame from material that is pre printed edge to edge. Small fit inaccuracies can often not be avoided – but the overall look is impressive.

Digital printing

Small quantity with vivid printing is more suitable to do this kind of printing. From a quantity of just 48 pieces and a delivery time of around four weeks after approval, all OEM design is welcomed.

Unique designs

The special production of a custom-made advertising umbrella that perfectly characterises your company offers practically unlimited creative freedom. Here are a few examples from our "umbrella building kit":

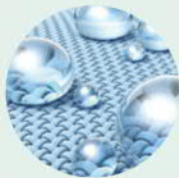

Cover material & colour

The premium polyester pongee is available in 17 standard colours, depending on the model. The cover can also be fully dyed to your specification on request.

Coating & finishing

Achieve special effects with colour, metallic or reflective coatings. Finishings such as the Teflon™ fabric protector improve the pearl-off effect and protect against dirt.

Opening mechanism

Whether with a manual opener with safety runner, automatic opening or mini umbrella with auto open/close function for convenient opening and closing at the push of a button – you can choose your favourite.

Refinement

Make a statement e.g. with your very own design of woven label, reflecting elements or an individual carrying loop made from plastic.

Umbrella frame

By choosing the frame, you not only determine the windproofness and resistance to turning inside out. The combination with coloured fiberglass elements allows surprising effects to be created.

Umbrella shaft

Alongside wood and steel in different variants e.g. galvanised black or with a coloured plastic coating, aluminium or fiberglass are also available to choose.

Handle types & handle material

You determine the shape and material to suit your tastes or select special individual shapes, such as the existing product design like a tool handle.

Sleeve & packaging

Design the matching sleeve and use the fully printed box and gift packaging for the perfect presentation.

Windproof automatic frame

Hand friendly soft handle

Handle with promotional labelling option
